

# TWIN SHOWER SYSTEM

## Installation Guide

### Important Installation Considerations

1. NOTE: Some showers may not provide an effective shower when used with gravity fed heated water systems or where pressures are less than 150kPa at the outlet. Additionally showers with flow rates of less than 9L/min may not allow the following to function correctly:

- \_ some instantaneous water heaters
- \_ some tempering valves
- \_ some thermostatic mixing valves

2. Some shower heads only operate correctly when hot and cold water supplies are both mains pressure and may not be suitable for some instantaneous hot water services.

3. When water pressure is in excess of 500kPa a pressure limiting device is required

### Technical Specifications:

Operating Pressure:

Min: 150kPa/1.5bar

Max: 500kPa/5.0bar\*

Optimum: 150kPa/1.5bar - 500kPa/5bar

Recommended installation of pressure limiting valve if supply exceeds 500kPa

Operating Temperature:

Hot: Max 80°C\*

Cold: Min 5°C

Inlet Connections:

All ½" BSP

NOTE:

- After installation all connections must be checked for leaks
- All installations must be carried out in compliance with relevant water regulations\*.

### Technical Drawing

warrants this product against manufacturing defects and that it is suitable for use under the general operating conditions specified in this instruction sheet. However, regional regulations apply and may affect your warranty.

1.

Step1 Please asseble all the components

2.

Step 2 Measurement drawing

3.

Step 3: Please prepare a ceiling framework for Shower Head

4.

Step 4 The fitting base of shower head should hang on and connect water inlet,Then finished

### CLEANING

Water contains lime which remains on the surface after the water has evaporated. These lime deposits can be prevented from forming by wiping immediately after use.

To clean the chrome-plated surfaces use a soft cloth, soap and warm water. Never use cleaning agents that contain a corrosive acid or a scouring additive.
